

The digital identity of real estate.

Every home carries a permanent record of what was built, repaired, inspected, permitted and paid for. Know the home before you own the home.

A record that outlives the transaction

Owners, agents and lenders change. The HomeToken stays with the property.

Append-only, tamper-evident history

Every event is hash-chained. Corrections are new entries, never edits.

Answers grounded in the home's own record

The assistant cites events and documents, and says when it does not know.

A HomeToken is a property record. It is not a deed, a security, or cryptocurrency.
